

# THE BEST MATTRESS ARE ON THE WAY!

## HOW TO SETTLE IN EASILY & HASSLE-FREE?

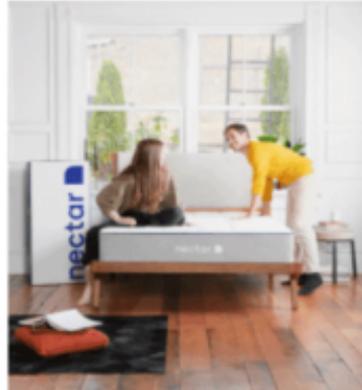

### Step 1: It's easier to move if you take it out of the box

It will make it easier to manoeuvre through your home. Please take good care as it is very heavy. We would always recommend this as a 2-person job (but we understand that this option is not available to everyone).

### Step 2: Opening your mattress

First, remove all of the soft plastic wrappings and unroll the mattress into the position it will stay. Only then, use the cutter inside the box to help you pierce, then open the plastic packaging.

PLEASE be careful. Once you've pierced the plastic, the mattress will start to expand. Be really gentle as you don't want to damage your new mattress cover.

### Step 3: Watch it Expand

Once you've put it on your bed base, it should take between 3-5 hours to expand, and you can already sleep on it (but it takes around 24-48 to expand fully) to 24 cm.

### Step 4: Be sure your bed base is ready!

If you have a slatted bed base, be sure that the gaps are even and you haven't got any broken slats (this will make the mattress sag and affect your support).

### Step 5: Ventilate your room

As this mattress is made of memory foam (and lots of it!), there can be a smell that is normal, be sure to ventilate your room, which should start to fade after a few days. Nectar is Certipur certified - so you don't have to worry about any harmful chemicals.

### Step 6: Don't wash the cover!

We recommend rotating your mattress every 3 months (please don't remove or wash the cover - you should only need to spot-clean) - better yet, make sure you use a mattress protector!
